Page	Location	Description	Date corrected
44	"Objective 2.2" section, answer 1	<p>Reads:</p> <p>Distance-vector routing protocols (such as OSPF) provide a more accurate view of a network than a link-state (such as RIPv2) routing protocol does. Link-state protocols only look at the number of hops. Distance-vector protocols evaluate many more variables.</p> <p>Should read:</p> <p>Link-state routing protocols (such as OSPF) provide a more accurate view of a network than a distance-vector (such as RIPv2) routing protocol does. Distance-vector protocols only look at the number of hops. Link-state protocols evaluate many more variables.</p>	3/20/2015
